

FEDERATED STATES OF AMERICA

COLUMBIA CLASS LAND TRAIN STATISTICS DOCUMENT

Federated States of America									
Land Train Front and Rear Tender									
RANGE BAND	1	2	3	4	DR	CR	Mv	HP	
-	-	-	-	-	4	5	7"	2+	
Cost: 30+ Points									
-	-	-	-	-	AP	AA	CC	RR	
-	-	-	-	-	2+	2+	2+	-	

This is a **SMALL CLASS** model

This model uses the **LARGE** template for moving.

If moved, this model **MUST** make a Minimum Move of 1"

Up to **40%** of your points can be spent on **SMALL CLASS** models

Federated States of America Land Trains are deployed in **SQUADRONS** of 1 model

Model Assigned Rules (MARs): Modular, Momentum, Small Target, Streamlined Hull.

Weaponry Arcs:

Any weapon arcs on this model are listed in the individual Carriage entry. All weaponry measurement is made from the location weapon of the weapon being used.

Modular MAR:

A Land Train is composed of a Front Tender, followed by 1-3 Carriages, and then a Rear Tender. The points cost of the Land Train is determined by adding the cost of each Carriage to the cost of the Front and Rear Tender:

Front Tender and Rear Tender: **30pts**

1-3 Carriages: Points variable [see individual Carriage entry].

For example, a Land Train consisting of two Transport Carriages and a Gun Carriage would cost **30** points for the Tenders, plus **40** points for the two Transport Carriages, plus **25** points for the Gun Carriage, giving a total of **95** points for the Land Train.

When the Land Train is deployed it is formed into a single model with the Front Tender placed at the front, then the Carriages and finally the Rear Tender placed at the back so that they form an unbroken line. The front edge of each piece must always remain in contact with the rear edge of the piece in front. The Tenders and Carriages are now treated as a single model in all respects.

The Damage Rating [DR], Critical Rating [CR] and Movement Value [Mv] of the entire model is taken from the Front and Rear Tender. The Hull Points Value [HP], Assault Points [AP], Ack-Ack Value [AA] and Concussion Charges Value [CC] of the entire model is derived by adding the values listed in the individual Carriage entry to the Front and Rear Tender Value.

For example, the Land Train described above would have $(2+1+1+1) = 5$ **Hull Points**, $(2+2+2+0) = 6$ **Assault Points** and so on.
